Whether it's today's state-of-the-art automatic sensor flush valves and faucets or our equally dependable manual restroom equipment, Zurn's Commercial Brass Products are being specified and installed in more and more of today's commercial, institutional and industrial projects.

The Zurn AquaSense AV line of automatic sensor flush valves, faucets and hand dryers addresses today's social concerns with "no touch", user-friendly operation while assisting the building owner with better water conservation, ADA compliance and reducing maintenance costs. Zurn AquaSense AV products are designed for both hardwire and battery installations.

Our AquaVantage and AquaSense AV flush valves along with AquaSpec faucets incorporate state-of-the-art materials that resist deterioration due to chemical and harsh water conditions. For those installations that are specified for manual equipment, both AquaSpec and AquaVantage products are ADA compliant and come with extended warranties. AquaSpec faucets are NSF certified and are supplied with quarter-turn ceramic disc cartridges which carry a lifetime warranty.

Whichever you choose – AquaSense AV, AquaSpec or AquaVantage – you can be assured that you made the right choice and will be rewarded with years of quality, trouble-free products.

Fast Becoming America's Favorite Faucets and Flush Valves.
