

Keeping It Simple.

One flush valve ...
you choose the method
of activation.

Zurn offers you simple alternatives for flush valve actuation. Our gear-driven sensors are mounted through the handle port of the flush valve. Actuation at this location provides reliability and ease of maintenance. The internal chloramine resistant triple filtered diaphragm kit is the same for all of our AquaVantage flush valves, whether manual, battery sensor or hardwire. No need for expensive custom replacement diaphragm kits. Let performance be your guide in choosing Zurn flush valve products.

- Ease of installation and maintenance
- Water conserving
- Cost effective

Manual – Z6000AV

- “No Leak” handle assembly •
- Chemical resistant “Go Blue” seals •
- ADA compliant •

Battery Sensor – ZER6000AV

- Long life battery operation •
- Manual flush button •
- Life span of one million cycles •
- Not affected by harsh water conditions •

Hardwire – ZEMS6000AV-IS

- Sensor integral to valve •
- No need for electrical boxes •
- Life span of one million cycles •
- Auto sensing setup •
