

POD Pro Stud Supported Water Closet Carrier

Innovative Design for
Modular Construction

Increase efficiency with the ZPWC1 water closet carrier. This innovative solution secures to the studs of the wall and eliminates the need for additional support materials, promoting jobsite flexibility. Seven fitting options attach to the carrier from behind the wall, allowing fitting installations at various times throughout the project. This enables modular manufacturers to eliminate labor while easing installation — saving time and money.

The ZPWC1 is ideal for healthcare and hospitality environments.

Structural Integrity

Carrier mounts to wall studs, while maintaining a 500 lb. load rating.

More Usable Space

The compact design is our narrowest chase offering for more room inside the POD.

Secure Delivery

Fittings can be installed at jobsite eliminating the risk of damage during transportation.

Flexible Installation

The universal faceplate accommodates wall mount or floor mount back outlet fixtures.

Jobsite Adaptability

Adjustable 3 in. diameter coupling accommodates varying wall thicknesses.
