

Model FDC2

Fire Department Connections

Application

Zurn FDC2 Fire Department Connections provide a means for firefighters to connect hose lines to a fire sprinkler system to supplement the domestic water supply. This ensures active fire protection systems have an adequate water supply. The FDC2 has two swivel inlet connections separated by a single clapper that acts as a check valve against backflow if only one hose is attached. The FDC2 is available in straight and 90 degree body styles.
