

POD Pro Drainage Solutions

Our patented POD Pro drainage solutions keep pace with your prefabricated project demands, while satisfying your design goals.

ZPT1 Linear Drain

This drain offers complete flexibility. First, you choose from our curated grate styles. From there, it's pod ready. Thanks to its low profile and drop-in outlet technology, the ZPT1 linear drain makes it easy to go from offsite to onsite.

The ZPT1 is the shallowest sanitary drain on the market. It features an anti-ponding V-shaped channel and industry-grade stainless steel construction.

Trending in the Industry

The modular, flexible design eliminates transportation challenges and rework, while the patented outlet technology easily drops in and secures into place.

Low Profile

The low-profile design meets the challenges of thin floor construction and prefab prerequisites, yet accommodates changes after installation, saving you material costs.

Adaptable

The 12" no-hub extended barrel clears 8" or less in structural slab thickness. You can choose your grate style beforehand, and you won't need additional supplies or adapters to tie into the sanitary system.

POD Pro Drainage Solutions

ZPD1 Floor Drain

Easily install the ZPD1 floor drain into construction applications where thin flooring designs and drain outlet protrusions cause transportation issues and installation constraints. The drain saves installation time and reduces the risk of rework on the jobsite. It offers the same labor-saving installation that contractors have come to expect from Zurn products.

Low Profile Design

The ZPD1 can fit within a 7/8" floor design, making it a perfect solution for post-tension slab applications and modular construction applications.

Peace of Mind

The patented drop-in outlet provides modular manufacturers with the confidence they need to install a floor drain without the risk of rework.

Adaptable

The 12" no-hub extended barrel provides enough clearance to easily surpass most structural slab thicknesses without requiring additional supplies to attach the drain to the sanitary system, saving time and money.

ZPTSP POD Pro Barrier Trap Seal

The ZPTSP barrier trap seal is inserted easily into shallow floor drains and trench drains and can be removed with ease for cleaning. It's compatible with the ZPT1 and ZPD1 POD Pro drains, making them prefab ready.

- Available in 2" and 3" outlet sizes
- Helps prevent harmful gases and odors from emitting up through the drain
- Prevents insects from entering the property
- ASSE, ICC and IAPMO approved

Reduce drain trap evaporation by

97%
