EZCarry® High Performance Water Closet Carrier System
Z1201, ZE1201, ZF1201, ZN1201, Z1202, ZF1202, and ZN1202

OPTIONS and VARIATIONS

All Zurn systems optional variations are specified as a prefix and/or suffix letter or number added to the series designation.

PREFIXES

Z  D.C.C.I System with Zurn “ZZ” Adjustable Coupling
ZQ  D.C.C.I System with NPT Faceplate, Non-Adjustable Coupling
ZE  D.C.C.I System with Zurn “ZZ” Adjustable Coupling (ZE1201)
ZQE  D.C.C.I. System with NPT Faceplate, Non-Adjustable Coupling (ZE1201)
ZF  D.C.C.I. System with Zurn “ZZ” Adjustable Coupling (ZF1201, ZF1202)
ZQF  D.C.C.I. System with NPT Faceplate, Non-Adjustable Coupling (ZF1201, ZF1202)

SUFFIXES

-A  Auxiliary Support Assembly (For “P” Dim. Greater than 18” [457mm])
-CC  Corrosion Resistant Cast Iron Coupling (2-1/4” [57mm] to 12” [305mm] NPSM thread type only)
-CE  EZ-Set™ Coupling (Patent Pending) with Integral Test Cap (Available 6” [152mm], 12” [305 mm] or longer when specified. Min. length 5” [127 mm]) (Not available on Z1201-XB, Z1202-XB, ZN1201, and ZN1202)
-CL  Custom Length Standard Polymer Coupling with Integral Test Cap (Specify length 4” [102mm], 8” [203 mm], 10” [254 mm], 12” [305 mm]) NPSM Thread type only (Not available on Z1201-XB, Z1202-XB, ZN1201, and ZN1202)
-CS  2 1/4” [57mm] Polymer Coupling with Integral Test Cap (NPSM Thread type only) (Not available on Z1201-XB and Z1202-XB)
-F  Floor Mounted Back Outlet Closet Connection (Not available on Z1201-XB, Z1202-XB, ZN1201, and ZN1202)
OPTIONS and VARIATIONS (continued)

All Zurn systems optional variations are specified as a prefix and/or suffix letter or number added to the series designation.

SUFFIXES (continued)

-G  Galvanized Cast Iron
-JC  2" [51mm] Auxiliary Inlet with 1/8" Bend for Back to Back Installations with Closet and Urinal or Closet and Lavatory (Z1201-XH, Z1201-XB, Z1201-NL4, Z1201-NR4, ZF1201, and ZN1201)
-JJ  Two 2" [51mm] Auxiliary Inlets (Z1202-N4, Z1202-ND4, Z1202-H4, Z1202-HD4, ZF1202, and ZN1202)
-JL  2" [51mm] Left-Hand Auxiliary Inlet (Z1202-N4, Z1202-ND4, Z1202-H4, Z1202-HD4, Z1202-1HR4, ZF1202N, and ZN1202)
-JR  2" [51mm] Right-Hand Auxiliary Inlet (Z1202-N4, Z1202-ND4, Z1202-H4, Z1202-HD4, Z1202-1HR4, ZF1202, and ZN1202)
-M  Auxiliary Foot Support for ‘P’ Dim. 10” [254 mm] thru 18” [457 mm]
-RYK  Unistrut Pre-Fab Foot Support (Z1201, Z1202, and ZE1201)
-RYK17 One Piece Unistrut Pre-fab Foot (Z1201, Z1202, and ZE1201)
-VL  Left Hand Vent Connection (Z1202-XB, Z1202-XH, ZF1202, and ZN1202)
-VP  Vandal-Proof Trim
-45  Finishing Frame for Siphon Jet System (Not available on Z1201-XB, Z1202-XB, ZN1201, and ZN1202)
-50  Flush Valve Supply Support for Water Closet
**Water Closet Carriers**
Z1207, Z1208, Z1209, Z1212, Z1214, Z1215, Z1216, Z1280, Z1282, Z1283, Z1284 and Z1285

**OPTIONS and VARIATIONS**

All Zurn systems optional variations are specified as a prefix and/or suffix letter or number added to the series designation.

**PREFIXES**

- **Z** Dura-Coated Cast Iron System with “ZZ” Coupling (Z1203 thru Z1209 Series)
- **ZQ** Dura-Coated Cast Iron System with NPT Faceplate and Non-Adjustable Coupling
- **ZN** D.C.C.I System with Zurn “ZZ” Adjustable Coupling (ZN1208 and ZN1209 Series)
- **ZNQ** D.C.C.I System with NPT Inlet Non-Adjustable Coupling (ZN1209 Series)

**SUFFIXES**

- **–A** Auxiliary Support Assembly (For ‘P’ Dim. Greater than 18” [457mm]) (Z1207, Z1208, Z1209, Z1214, and Z1215)
- **–AL** Adapter Lug
- **–AV** 2” NH Vent Connection (Z1214, Z1215)
- **–B** Blowout Type Fixture Support (3-Bolt System Chair Carrier)
- **–BC** Back Cleanout (Z1207 not available on back to back systems)
- **–BE** Barrel Extender (Up to 26” [660mm], Overall length of 40” [1016mm])
- **–CC** Corrosion Resistant Cast Iron Coupling (6” [151mm] to 12” [305mm])
- **–CL** Coupling Length Greater than 12” [305 mm] (Specify Length Required)
- **–CV** Closed vent (Use only where local codes allow)
- **–F** Floor Mounted Back Outlet Closet Connection (Z1212)

**ZQ- and ZEQ- Illustrated**

**ZQ- Coupling system for cutting off to required length after testing.**

**Z-** Adjustable coupling with O-ring seal easily adjusted with Zurn coupling wrench.

**Z- and ZE- Illustrated**

**ZQ-** Coupling system for cutting off to required length after testing.

OPTIONS and VARIATIONS (continued)

All Zurn systems optional variations are specified as a prefix and/or suffix letter or number added to the series designation.

**SUFFIXES (continued)**

- **-G** Galvanized Cast Iron
- **-HT** Hanger Type Closet Adapter (Z1283, Z1285)
- **-JJ** Two 2” Auxiliary Inlets
- **-JS** 2” Stack Side Auxiliary Inlet
- **-JV** 2” Vent Side Auxiliary Inlet
- **-LA** Less Auxiliary Connections (Z1209)
- **-M** Auxiliary Foot Support For ‘P’ Dim. 10” [254mm] - 18” [457 mm]
- **-PA** Adjustable Coupling Connection for Penal Fixtures (Z1214 and Z1215)
Water Closet Carriers
Z1207, Z1208, Z1209, Z1212, Z1214, Z1215, Z1216, Z1280, Z1282, Z1283, Z1284 and Z1285

OPTIONS and VARIATIONS (continued)

All Zurn systems optional variations are specified as a prefix and/or suffix letter or number added to the series designation.

**SUFFIXES (continued)**

- **PB**  
  Coupling Connection for Penal Fixtures (Z1214 and Z1215)

- **PC**  
  Coupling Connection with 4” [102mm] Cleanout for Penal Fixtures (Z1214 and Z1215)

- **PD3**  
  3” [76mm] Double Plastic Pipe Connection (Z1285)

- **PF**  
  Pre-Fab Foot

- **PN**  
  NH Coupling Connection with 4” [102mm] Cleanout For Penal Fixtures (Z1214 and Z1215)

- **PP**  
  Anti-Clogging Pin in Plug (Z1214, Z1215 and Z1216)

- **PS**  
  Pre-Fab Slotted Foot

- **RYK**  
  Unistrut Pre-Fab Foot

- **T**  
  Threaded Connection

- **VP**  
  Vandal Proof Trim

- **X**  
  500lb. Carrier with Heavy-Duty Rear Anchor Tie Down

- **X3**  
  3” [76mm] Carrier Foot Extension Assembly

- **X4**  
  4” Foot Extension Assembly

- **Y**  
  Foot Support System (Z1283, Z1284 and Z1285)
Water Closet Carriers
Z1207, Z1208, Z1209, Z1212, Z1214, Z1215, Z1216, Z1280, Z1282, Z1283, Z1284 and Z1285

OPTIONS and VARIATIONS (continued)

SUFFIXES (continued)

-45 Finishing Frame for Siphon Jet System
-45-B Finishing Frame for Blowout System
-50 Flush Valve Supply Support for Water Closet
-57 4” “Neo-Seal” Closet Gasket Kit
-77 Retrofit Cap Nut

**4.** Remove adhesive backing off one side of NEO-SEAL gasket.

**5.** Carefully lift and remove adhesive backing off other side of NEO-SEAL gasket.

**6.** Place closet in position over adjustable coupling without delay. Coupling should extend beyond finished wall far enough to compress NEO-SEAL gasket (see other side).

Clean surfaces are important. Take special precaution to make sure all surfaces are clean and dry before using adhesive gasket.

---

4" "Neo-Seal" Closet Gasket Kit
This positive sealing gasket with a special adhesive formula eliminates leakage often encountered with inferior gaskets. The gasket is made from expanded Closed Cell Dupont Neoprene. It’s a controlled-analysis, specially prepared seal (not a sponge rubber). Retains its resiliency permanently. Resistant to water, petroleum products, chemicals, similar substances, or rotting.

Complete installation instructions are contained in an easily stacked flat cardboard container.

**EASY TO INSTALL**

1. Wipe gasket recess of fixture clean with dry cloth. Remove and discard inner foam circle from NEO-SEAL gasket.

2. Carefully lift and remove adhesive backing off one side of NEO-SEAL gasket.

3. Press adhesive-coated side of NEOSEAL gasket firmly into gasket recess in fixture being sure it bottoms out in groove, and that contact between adhesive and china is maintained.

4. Wipe lip of coupling clean and dry.

5. Remove adhesive backing off other side of NEO-SEAL gasket.
Wall Urinal/Service Sink, Trough Urinals, Water Cooler Carriers
Z1217, Z1218, Z1221, Z1222, Z1223 and Z1225

OPTIONS and VARIATIONS

All Zurn systems optional variations are specified as a prefix and/or suffix letter or number added to the series designation.

PREFIXES
Z Dura-Coated Cast Iron System with Plate(s) or Arms

–W6  6" [152mm] Wide Support Plate (Z1251)

–79  Paraplegic Rough-In
Z1201 Off-The-Floor Water Closet System Offers:

1. All Dura-Coated cast iron construction with 500 lb. load bearing capability to A.N.S.I. standards.
2. Vertical adjustment of 4-1/2" [114mm] - 9" [229mm] for Siphon-Jet closet installation. System accommodates for both paraplegic and standard rough-in requirements.
3. 13 5/8" [356mm] required from finished wall to back of system (Z1201-NL4, NR4).
Z1222
Installed in 2 x 4 stud wall, offers fixture support independent of wall. The system is lagged to the floor as shown. Standard hardware furnished for wall thickness (front of plate to finished wall) up to 4-3/4" and minimum space requirements for system are 3-3/8".

Z1231-SL
Installed behind a block wall. The fixture is installed over cast iron arms and leveled by use of four leveling screws. Securing the fixture is accomplished by turning down the locking devices. Larger sleeves can be used to accommodate thicker wall materials.
Z1231-EZR ADJUSTMENT INSTRUCTIONS  Factory Assembly

STEP 1
Refer to installation instructions in the box/bag containing the arms and sleeves to determine the appropriate dimensions for the fixture.

STEP 2
Measure from the bottom of the upright ("E") to the center of the large tapped (1-1/4″ - 11-1/2″ NPT) hole in the flat plate header ("C") to the set height dimension for centerline of sleeves. Tighten the nuts and U-bolts ("D") to secure flat plate headers ("C") to each upright ("E").

STEP 3
Slightly loosen the two hex head machine screws ("B") which are in the right-hand side upright at the stamped-in ruler and slot on cross bars ("A"). Make sure the bottom of the uprights ("E") are sitting on a flat surface if standing up or against an even surface if laying down, to make sure the bottoms are even. Using the stamped-in ruler on the cross bars ("A"), slide the right-hand upright ("E") to the desired location until the center of the top and bottom hex head machine screws ("B") are at the proper stamped-in ruler mark (i.e. 17-1/2, 18-1/4, etc.) for the center-to-center spacing between the uprights ("E") which will then give the sleeves and arms their correct center-to-center spacing dimensions. Tighten the two hex head machine screws ("B").

STEP 4
Recheck tightness of all U-bolts and nuts ("D") and hex head machine screws ("B").

STEP 5
Mount uprights ("E") to concrete floor using 1/2 lags (furnished by others).
High Rough-In Requirements for Physically Handicapped Water Closet Bowls

Illustrations shown below are based on meeting ANSI Standard A-112.19.2, Vitreous China Plumbing Fixtures, Para. 5.1.3.3 stating “Physically Handicapped” water closet bowl is a siphon jet water closet bowl measuring 18” from the floor to the top of the rim.

The dimensional drawings shown are based on using 1/8" [3mm] pitch and 5-1/4" [133mm] centerline of closet outlet to finished floor; 15" [381mm] to rim for standard bowl height with 7-1/4" [184mm] and 18" [457mm] respectively for physically handicapped bowl.

Physically handicapped water closet bowls may also be incorporated on the vertical Z1202 System by locating the faceplate in the highest position on the fitting.

Adjustable Zurn Z1201 and Z1202 Systems

For installation of fixtures, up to a ten fixture maximum, either side of stack fitting:

- 5-1/4" Centerline of Closet Outlet
- 7-1/4" Centerline of Handicapped Closet Outlet (Will vary depending on fixture and flooring)
- 1/8" Pitch Per Foot

The handicapped fixture can be installed on any of the last three fixtures at the far right end of a battery.

Maximum Adjustment of Zurn Z1201 and Z1202 Systems

</table>

For any given rough-in height, the fitting can be adjusted up and down (a maximum of 4" [102mm]) to accommodate drainage pitch on long runs. When back-to-back and handicapped rough-ins are used, note that there are further limitations to the number of fittings in a given run.
### DETERMINATION OF RIGHT- AND LEFT-HAND SYSTEMS

Stand facing the fixture. If flow is from the right, Zurn System is right-hand. If flow is from the left, Zurn System is left-hand.

#### DETERMINATION OF COUPLING AND FIXTURE DISTANCES FROM FRONT OF WALL

To ensure a tight seal at outlet of closet having a rectangular groove the front end of the coupling should be located to compress the gasket adequately when the fixture is in the desired location. This dimension will vary depending on depth of recess (Dim. A) in closet. The following formula may be used to determine amount coupling should extend (Dim. B) in front of finished wall.

\[
T + X + \frac{5}{8}" = B
\]

To ensure a tight seal at outlet of closet having a rectangular groove the front end of the coupling should be located to compress the gasket adequately when the fixture is in the desired location. This dimension will vary depending on depth of recess (Dim. A) in closet. The following formula may be used to determine amount coupling should extend (Dim. B) in front of finished wall.

\[
A + X - \frac{1}{2}" = B
\]

With fixtures having vee shaped grooves, coupling may have to extend an additional 1/8" or more. With any closet, the coupling must compress the gasket enough so the adhesive coated surfaces are in good contact with the china and the face of the coupling.

**IMPORTANT:** Bearing nuts and washers must be located properly to establish and maintain dimension "X."

Dimensions below based on \( B = \frac{3}{8}".\)

### DISTANCE FIXTURE BOLTS LOCATED IN FRONT OF WALL

To locate fixture bolts:

- Let \( T \) = thickness of wall flange of closet
- \( X \) = distance closet is to be located from finished wall
- \( B \) = distance fixture studs should extend in front of finished wall.

Thus, \( T + X + \frac{5}{8}" = B \)

The "Minimum 'P' Dimension" is the minimum dimension from front of faceplate to finished wall:

<table>
<thead>
<tr>
<th>Z1201/Z1202</th>
<th>Z1208 thru Z1209</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-3/4&quot;</td>
<td>1&quot;</td>
</tr>
</tbody>
</table>

The "Standard 'P' Dimension," which is regularly supplied unless otherwise specified, provides for the following dimensions from the front of the faceplate to finished wall:

<table>
<thead>
<tr>
<th>Z1201/Z1202</th>
<th>Z1208 thru Z1209</th>
</tr>
</thead>
<tbody>
<tr>
<td>5&quot;</td>
<td>6&quot;</td>
</tr>
<tr>
<td>4&quot;</td>
<td>5-1/8&quot;</td>
</tr>
</tbody>
</table>

Longer 'P' dimensions (or shorter) with couplings up to and including 12" are furnished at no extra charge. An additional charge will be made for greater 'P' dimensions (see Suffix -CL).

**ALLOWANCE FOR CONCEALED FLUSH VALVES**

When wall closets are installed with concealed flush valves having rear inlet supply, location of faceplate is important – for Siphon Jet bowls it is not necessary to locate faceplate behind supply line, since supply line will clear top of faceplate and vent line. For Blow Out installations, however, faceplate must be located behind supply line to prevent interference of faceplate with supply line.
CARRIER SYSTEMS

Z1201 and Z1202 EZCarry® High Performance Water Closet Carrier System

INSTALLATION INSTRUCTIONS

For EZCarry Bank Assembly Installation Instructions refer to Zurn form #C46 which can be obtained through the Zurn website.

1. Lay carrier fitting on floor, waste line barrel down. See Fig. 1

2. Place faceplate gasket from trim kit on fitting. Align the gasket holes with the tapped holes in the fitting. See Fig. 2

3. Remove the faceplate/feet from trim kit box and align the faceplate slots with the gasket and fitting holes. Using four ½” bolts from the Fitting & Faceplate hardware bag, secure the bolts with a ratcheting wrench (25-35 lb-ft of torque). See Fig. 3

4. Factory faceplate/feet assembly is set for a 5 ½” rough-in height. Locating featuring C (See Fig. 4) on each foot identifies at 7 ½” rough-in height, commonly used for ADA applications. To adjust the rough-in height, loosen the feet bolts and set the top two bolts to the desired height (adding additional height for tiling where required). For the highest position, swap bolts from A to B location. See Fig. 4a. Secure bolts using wrench (25-35 lb-ft of torque).

Note: For certain rough-in heights, the bottom of the faceplate may need to be removed along the defined cut lines. See Fig 4b
5. Standing the assembly upright, loosen the faceplate bolts to adjust the waste line height and pitch as required. Re-secure bolts using ratcheting wrench (25-35 lb-ft of torque). See Fig. 5

6. Secure the anchor stabilizer to the fitting using the anchor foot assembly instructions and hardware provided. Ensure the anchor foot sits level on the floor and nuts are tightened. See Fig. 6

7. Align the carrier with the waste line. Mark locations on the floor for anchoring studs. See Fig. 7

8. Prep the floor for concrete anchors and place the carrier back into position. Lag down the feet using ¼” anchors (supplied by others). See Fig. 8

9. Using the o-ring seal and lubricant bag, ensure the o-ring and coupling are well lubricated. Insert the o-ring, ensuring it does not twist. See Fig. 9

**NOTE:** O-ring installation is critical. Improper installation will cause leakage behind the finished wall.
10. Coupling Installation

a. **Standard, -CS, and –CC Couplings** - Thread the coupling into the faceplate by hand until it engages the o-ring and begins to resist. Using a coupling wrench (Z1200-CPLG-WRNCH-3 purchased separately), continue to turn the coupling into the o-ring to create a water-tight seal. See Fig. 10

![Fig. 10](image1)

Adjust the coupling to extend 5/16" from the finished wall. Ensure the coupling threads are protected from debris adhesion to allow adjustment after the wall is in place. If the coupling must be shortened, cut from the threaded end. Prevent damage to the o-ring by chamfering the cut end and thoroughly deburring. See Fig. 10a

![Fig. 10a](image2)

b. **EZ-Set™ Coupling** - Thread the coupling into the faceplate by hand until it engages the o-ring and begins to resist. Using a strap or pipe wrench, continue to turn the coupling into the o-ring to create a water-tight seal. Ensure the protective sleeve is flush with the test cap. See Fig. 10 & 10b

![Fig. 10b](image3)
11. Prep for finished wall. Fasten the (4) threaded rods from the finish bag into the faceplate, through the foot slots until each rod extends 5/8" past the closet bowl flange. Add included 5/8" washer to each lower rod, and secure nut on each of the four rods. See Fig. 11

**NOTE:** If the studs are too long they will bottom out in the finishing cap nut, preventing proper gasket compression which may result in leakage.

12. Slide plastic rod protectors onto rods. See Fig. 12

13. Perform 10-ft head pressure test.

14. Finished wall should be installed. Ensure appropriate size opening is made for coupling. For EZ-Set™ Coupling hole sizing See Fig. 13

15. Finish Coupling Preparation

   a. **Standard, -CS, and –CC Couplings** – Remove coupling protector. Ensure coupling extends 5/16" from finished wall. Knock out the test cap with a hammer and deburr sharp edges. See Fig. 14

   b. **EZ-Set™ Coupling** – Remove coupling protector. Hang the EZCUTGUIDE (purchased separately) See Fig. 15. Using an oscillating multi-tool with flush cut blade, remove the test cap and excess coupling length. Deburr sharp edges. See Fig. 16

Remove EZCUTGUIDE.

Prep the coupling end and flange, following PVC Cement manufacturer’s instructions. Glue flange to pipe with “TOP” properly aligned. See Fig. 17.
16. Thread a backup nut and bearing washer onto each 5/8" rod. Adjust hardware so that the front surface of each flat washer is 1/16" in front of the finished wall See Fig. 18. All bearing washers must be in the same plane to support the fixture and prevent cracking.

17. Peel off the removable backing from one-side of the Neo-Seal Gasket and seat into the groove of the water closet outlet horn. See Fig. 19

18. Peel off removable backing liner from the opposite side of the gasket and hang the water closet onto the threaded rods. Ensure Neo-Seal gasket seals to the coupling. See Fig. 20

19. Assemble a fiber washer and cap nut onto each rod and hand tighten. Secure closet with an additional half-turn using a wrench on each nut to complete the installation. See Fig. 21

Note: The closet should not make contact with the finished wall.
1. Lay carrier fitting on floor, waste line barrel down. See Figure 1.

2. Place faceplate gasket from trim kit on fitting. Align the gasket holes with the tapped holes in the fitting. See Figure 2.

3. Remove the faceplate/feet from trim kit box and align the faceplate slots with the gasket and fitting holes. Secure the (4) ø½ [13] bolts, from 66955-332-9 hardware bag, using a torque wrench (25-35 lb-ft of torque).
   - For ZF1201, see Figure 3a.
   - For ZN1201 and Z1201-XH/XB, see Figure 3b.

4. For ZN1201 and Z1201-XH/XB:
   To adjust the rough-in height, loosen the feet bolts (see Figure 4a) and set the desired height (adding additional height for tiling where required). Secure bolts using a torque wrench (25-35 lb-ft of torque).

   Note: For certain rough-in heights, the bottom of the faceplate may need to be removed along the defined cut lines. See Figure 4b.

For ZF1201:
The rough-in height is pre-set and cannot be adjusted.
5. Standing the assembly upright, loosen the faceplate bolts to adjust the waste line height and pitch as required. Re-secure bolts using a torque wrench (25-35 lb-ft of torque).

- **For ZN1201 & Z1201-XH/XB:**
  - For fitting in the lowest position, see Figure 5a.
  - For fitting in the highest position, see Figure 5b.

- **For ZF1201:**
  - For fitting in the lowest position, see Figure 5c.
  - For fitting in the highest position, see Figure 5d.

6. **For ZF1201 and Z1201-XH/XB:**
Secure the rear anchor assembly to the fitting using the instructions and hardware provided. Ensure the anchor foot sits level on the floor and nuts are tightened.

  - For ZF1201, see Figure 6a.
  - For Z1201-XH/XB, see Figure 6b.

**For ZN1201:**
There is not a rear anchor assembly for the ZN1201. See Figure 6c.

7. Align the carrier with the waste line. Mark locations on the floor for anchoring studs.

  - For ZF1201, see Figure 7a.
  - For Z1201-XH/XB, see Figure 7b.
  - For ZN1201, see Figure 7c.

8. Prep the floor for concrete anchors and place the carrier back into position. Lag down the feet using min $\phi_{\frac{1}{2}}$ [13] to max $\phi_{\frac{5}{8}}$ [16] anchors (supplied by others).

  - For ZF1201, see Figure 8a.
  - For Z1201-XH/XB, see Figure 8b.
  - For ZN1201, see Figure 8c.
9. Using the o-ring seal and lubricant bag, ensure the o-ring and coupling are well lubricated. Insert the o-ring, ensuring it does not twist. See Figure 9.

**Note:** O-ring installation is critical. Improper installation will cause leakage behind the finished wall.

10. Coupling Installation

a. **Standard, -CS, and –CC Couplings:** Thread the coupling into the faceplate by hand until it engages the o-ring and begins to resist. Using a coupling wrench (Z1200-CPLG-WRNCH-3 purchased separately), continue to turn the coupling into the o-ring to create a water-tight seal. See Figure 10a and Figure 10b.

Adjust the coupling to extend 5/16” from the finished wall (see Figure 10c). Ensure the coupling threads are protected from debris adhesion to allow adjustment after the wall is in place. If the coupling must be shortened, cut from the threaded end. Prevent damage to the o-ring by chamfering the cut end and thoroughly deburring.

b. **EZ-Set™ Coupling:** Thread the coupling into the faceplate by hand until it engages the o-ring and begins to resist (See Figure 10b). Using a strap or pipe wrench, continue to turn the coupling into the o-ring to create a water-tight seal. Ensure the protective sleeve is flush with the test cap, see Figure 10d.
11. Prep for finished wall. Fasten the (4) threaded rods from the finish bag into the faceplate, through the foot slots until each rod extends 5/8 [16] past the closet bowl flange (see Figure 11a).

- For ZF1201, see Figure 11b.
- For ZN1201 & Z1201-XH/XB, see Figure 11c.

**Note:** If the studs are too long they will bottom out in the finishing cap nut, preventing proper gasket compression which may result in leakage.

**Note:** For more installation instructions for Z1201-XB, see the instruction sheet that is inside the P1201-XB box.

12. Slide plastic stud protectors onto the threaded rods. See Figure 12.

13. Perform 10-ft head pressure test and/or other testing required by your local plumbing code.

14. Finished wall should be installed. Ensure appropriate size opening is made for coupling.

For EZ-Set™ Coupling hole sizing, see Figure 14.

15. Finish Coupling Preparation:

   a. **Standard, -CS, and –CC Couplings:** Remove the protective sleeve (see Figure 10d). Ensure coupling extends 5/16 [8] from finished wall (see Figure 10c). Knock out the test cap with a hammer and deburr sharp edges. See Figure 15a.

   b. **EZ-Set™ Coupling:** Remove the protective sleeve (see Figure 10d). Hang the EZCUTGUIDE (purchased separately) (see Figure 15b). Using an oscillating multi-tool with flush cut blade (see Figure 15c), remove the test cap and excess coupling length. Deburr sharp edges. Remove EZCUTGUIDE.

   Prep the coupling end and flange, following PVC Cement manufacturer’s instructions. Glue flange to pipe with “TOP” properly aligned. See Figure 15d.
16. Thread a backup nut and bearing washer onto each 5/8 [16] rod. Adjust hardware so that the front surface of each flat washer is 1/16 [2] in front of the finished wall (see Figure 16). All bearing washers must be on the same plane to support the fixture and prevent cracking.

17. Peel off the removable backing from one-side of the Neo-Seal Gasket and seat into the groove of the water closet outlet horn. See Figure 17.

18. Peel off removable backing liner from the opposite side of the gasket and hang the water closet onto the threaded rods. Ensure Neo-Seal gasket seals to the coupling. See Figure 18.

19. Assemble a fiber washer and cap nut onto each rod and hand tighten. Secure closet with an additional half-turn using a wrench on each nut to complete the installation. See Figure 19.

*Note: The closet should not make contact with the finished wall.*

MATERIALS and FINISHES

Zurn Cast Iron conforms to ASTM Specification for Gray Iron Castings A 48, Class 25. It is produced utilizing the latest equipment and newest developed foundry techniques. Zurn cast iron castings are characterized by a high degree of strength, corrosion-resistance, workmanship, and finish.

Zurn Duresist is a ductile iron complying with ASTM Specification A 536, Grade 60-45-10. Its physical properties make it ideal for grates and drain components that are subjected to severe and heavy duty service. Its chemical characteristics make possible a degree of corrosion-resistance far superior to that of cast iron. Zurn Duresist exhibits remarkable stress qualities, possessing a yield strength in the same range as that of cast carbon steel, while its ability to absorb the shock loading of traffic areas is unequalled, making its use ideal for all areas where extra heavy duty service is a requirement – whether indoors or outdoors – in chemical and metal processing plants or other industrial applications.

"Zurn Dura Coat" is a specially formulated paint designed to resist cracking and chipping. Dura Coat is a latex based coating developed to be used with cast iron substrate.

Zurn Galvanized Cast Iron is a process of applying heavy zinc coating to a thoroughly cleaned iron casting. This coating contains 95% zinc. Zurn galvanizing can be supplied on all cast iron parts. It increases longevity and is recommended wherever the discoloration caused by oxidation of cast iron is objectionable. Galvanize should be used in coastal and industrial areas where corrosive atmosphere may be encountered.

Cadmium Plated Cast Iron is a process of applying a heavy cadmium coating to a thoroughly cleaned iron casting. This coating contains 95% cadmium in a cold applied process. Cadmium plating can be supplied on all cast iron parts. It increases longevity and is recommended wherever the discoloration caused by oxidation of cast iron is objectionable.

Zurn Bronze is a semi-red brass conforming to ASTM Specification for Copper Alloy Sand Casting B 584, Copper Alloy No. 844. The exposed surface is normally supplied possessing a satin sheen texture which allows it to blend unobtrusively with surrounding finishes. When the application requires, Zurn Bronze can be polished to a high gloss.

Zurn Nickel Bronze is a unique material that is ideally suited to traffic-bearing grates and strainers in finished floor areas. It affords the combined advantage of greater strength, better appearance, and longer service life at the same price as chrome plated brass. Superior ductility and shock resistance are the result of a copper nickel alloy (Copper Alloy 997) having a wearing surface similar in appearance to satin chrome plate; however, because it does not have a plated surface it cannot chip, peel, crack, or wear off. It is highly resistant to corrosion; however, the process of oxidation will naturally occur over time with most metals. Methods have been developed to prevent, preserve, and restore metals affected by oxidation.

Chrome Plated Bronze is ideal for installation in walls, gutters, and other areas where a bright decorative finish is desired, and is not subject to the abrasive action of foot and other traffic. It is not recommended for installations where the abrasion will eventually wear through and cause peeling. It should always be specified for swimming pool fittings due to its high resistance to the halogens (chlorine, etc.), encountered in swimming pool sanitation.

Aluminum supplied is casting grade 319. This is an alloy containing both silicon and copper. It is a solid cast metal in a pleasing light gray color. The light weight, coupled with its exceptional strength and corrosion resistance, makes it ideal for drain components such as sediment buckets and strainers. When used with acid-resisting porcelain enamel coated drains, the possibility of chipping is minimized.

Zurn Stainless Steel castings are normally produced in Type CF8 (304) which is an 18-8 Austenitic Stainless possessing excellent corrosion resistant qualities. For some applications where conditions demand, Type CF8M (316) stainless steel can be supplied. Items formed from stainless steel sheet and other stainless steel products are regularly furnished in Type 304 with 316 as an optional material.

A.R.C. Acid Resisting Epoxy Coating is a baked-on powder coating, which produces a smooth, hard, high gloss finish. This epoxy based coating offers high impact resistance and excellent life expectancy in all drainage applications.

A.R.E. Acid Resisting Porcelain Enamel is a substantially vitreous or glassy inorganic coating bonded to metal by fusion at a high temperature above 800°F. This coating offers excellent acid, abrasion, and wear resistance. The coating is extremely hard and is the ultimate for sanitation in drainage applications.
Solving the puzzle of true paired performance

Zurn is the only manufacturer to offer a 1.1 gpf wall bowl system and a high efficiency carrier, providing a complete labor savings solution and added performance from rough-in through finish trim. This high efficiency restroom solution achieves industry leading line carry that no other manufacturer can provide.
High Efficiency Toilet and Carrier System

Feature and Benefits:

- Innovative Wall Bowl and Carrier Design
  - Engineered together to deliver reliable, consistent, and money-saving results

- 31% water savings over 1.6 gpf systems
  - Helps in achieving LEED® 30% threshold

- Evacuate waste over twice as far
  - Alleviates line carry concerns with low flow specifications

- Reliable, quick carrier installation
  - 30% lighter with additional labor savings accessories

- 3-year warranty
  - Convenience of one manufacturer to call on for all your needs
