Zurn FOG-ceptor the Perfect Ingredient for Florida Restaurant Project

Bono's Pit Bar-B-Q has been a staple of mouth-watering food throughout Florida since 1949. The key word in the name is "pit."

The restaurant aims to provide "the most authentic traditional southern BBQ experience" you could ever have. Its slogan is: "If you don't see a pit, it ain't legit."

Recently a franchise location of Bono's Pit Bar-B-Q in Neptune Beach, FL, installed three Z250H FOG-ceptor™ Interceptors, the ideal retrofit solution for demanding environments where high-performance fats, oil and grease separators are needed.

The Zurn FOG-ceptor is a 250-gallon fiberglass interceptor rated at 100 gallons per minute. Particularly suited for smaller food service industry applications, the FOG-ceptor is delivered as a complete system for interior, above ground, or buried exterior applications.

Backed by a 30-year warranty, the Zurn FOG-ceptor arrives at the job site within 24 to 48 hours after an order is placed, designed to minimize any business disruption.

At Bono’s Pit Bar-B-Q in Neptune Beach, the plumbing contractor is Doug’s Drains & More, Inc., based in Atlantic Beach, FL. The owner, Doug Parsons, was impressed by the fact that "the FOG-ceptor is user friendly and extremely easy to install. My guys could do three units in an 8 hour day!"

Parsons also liked that the FOG-ceptor interceptors are lightweight.

“We easily moved and lowered them into place with our small track hoe,” Parsons says. “Once we got the units into the hole, the flow control and piping were easy to install. Inspection was called in by lunch.”

The Zurn FOG-ceptor delivers the engineered benefits of fiberglass reinforced polyester (FRP) construction for superior resistance to corrosion, resulting in the lowest ongoing cost of operation and maintenance requirements. It outlasts concrete interceptors, providing superior performance with less maintenance. The smooth, fiberglass construction enables fast, complete pump-outs and easy rinse down — minimizing maintenance disruptions and saving the customer both time and money.

The Zurn FOG-ceptor interceptor has the following credentials:

• PDI G-101 Certified
• ASME A112.14.3 Certified
• UPC and IPC Approved
