# A SIDE BY SIDE COMPARISON!

## WILKINS MODEL 400 SERIES INSTALLATION VS. TYPICAL IN-LINE BACKFLOW PREVENTER INSTALLATION

- Reduce lay lengths by as much as 80% and allow smaller enclosure sizes, saving additional dollars.
- Eliminates the need for forming & pouring concrete thrust blocks, saving \$300 or more in materials and labor.
- Installed with a Valve Setter, eliminates the need for two elbows, two bolt packs and two valve support stanchions, also shorter spool lengths are required.

- Uses smaller vaults and enclosures meaning additional savings.
- Like all Wilkins 300 and 400 Backflow Preventers, the 400 "N" patterns allow better flow characteristics and low maintenance costs.
- With simplified installation, the "N" pattern is easier to install, saving time and labor.

### TRADITIONAL IN-LINE BACKFLOW PREVENTER

1ea. 6" Traditional Backflow Preventer	1,800.00 +
2ea. 6" Flanged elbows	200.00 +
2ea. 6" x Flanged spools	300.00 +
