Model PV-PRD
Pressure Reducing Valve

[ maintenance instructions]

Maintenance Instructions

The PV-PRD Pressure Reducing Valve may be installed in any position. There is one inlet port and two outlets, for either straight or angled installation. A flow arrow is marked on the body and should be oriented as needed.

Disassembly
Prior to disassembly, relieve all pressure in pilot system and then remove the PV-PRD.
1. Secure valve body and remove main cap on bottom of valve using an adjustable wrench.
2. Use a 13 mm socket to remove the plunger.
3. Next remove adjustment cover (plastic cover), 3/8” adjustment bolt with nut, 8 socket head screws around the pilot bell using a 5/32” hex key, spring, and spring disc.
4. At this point the PRV stem yoke is free to move and can be removed from the valve body.
5. Continue to remove the 5/16” diaphragm nut, lock washer, and diaphragm retainer.
6. After completely disassembling, thoroughly clean and inspect all components before reassembly. Replace any parts as necessary after inspection.
7. The pilot seat generally does not need to be removed, but it can be removed with a 1/2” socket, if required.

Reassembly
Reassembly of the PV-PRD is the reverse of disassembly.
1. Install the new o-ring on top of pilot yoke threads followed by new diaphragm and diaphragm disc. Then place lock washer over pilot yoke stem along with the 5/16” diaphragm nut and tighten. Diaphragm bolt holes must be centered on yoke legs. See following diagram:

   CENTER YOKE LEGS BETWEEN DIAPHRAGM HOLES

   YOKE LEGS

2. Next carefully slide yoke assembly into body and around pilot seat.

   NOTE: Line up diaphragm screw holes with holes in body. Move yoke up and down checking for yoke contacting or dragging on valve body.

3. Then attach plunger to the bottom of the pilot yoke via the main cap hole and tighten with a 13 mm socket.
4. Install main cap in bottom of valve body with new o-ring.
5. Install spring, spring disc, and pilot bell on the valve body.
6. Insert socket head cap screws into pilot bell holes and thread into valve body. Tighten all screws in a cross pattern.
7. Install adjusting screw by hand with jam nut. Set valve once reinstalled into main valve pilot system.
8. While flowing water as shown in Table 1, adjust the Wilkins PV-PRD control to desired pressure if installed on an ACV. To change pressure setting, turn the adjusting screw clockwise to increase pressure, counterclockwise to decrease pressure. There must be liquid flowing through the valve during pressure adjustments. When the desired setting has been made, tighten jam nut.
9. For further assistance or ordering replacement parts go to www.zurn.com or call product support 877-222-5356.

ITEM | DESCRIPTION
--- | ---------------------
1 | 3/8” PRV-PILOT BODY, LEAD FREE BRASS
2 | PLUNGER, SS W/BUNA NITRILE 90 SHORE
3 | MAIN CAP, LEAD FREE BRASS
4 | ADJUSTMENT COVER
5 | 3/8”-16 ADJUSTMENT BOLT, BRASS
6 | 3/8” PILOT SEAT, SS
7 | 20-200 PSI SPRING, CHROME SILICON
8 | DIAPHRAGM DISC, SS
9 | SPRING DISC, SS
10 | PILOT BELL, BRASS
11 | O-RING, BUNA NITRILE NSF LISTED
12 | 5/16”-18 DIAPHRAGM NUT, SS
13 | 10-32X5/8 SOCKET HEAD CAP SCREW
14 | DIAPHRAGM NYLON REINFORCED BUNA NITRILE
15 | PRV STEM YOKE, SS
16 | 3/8”-16 JAM HEX NUT, SS
17 | 5/16” INTERNAL TOOTH LOCK WASHER, SS
18 | O-RING, BUNA NITRILE NSF LISTED
19 | UL TAG RED, BRASS

NOTICE: Annual inspection and maintenance is required of all plumbing system components. To ensure proper performance and maximum life, this product must be subject to regular inspection, testing and cleaning.

WARRANTY: WILKINS Valves are guaranteed against defects of material or workmanship when used for the services recommended. If in any recommended service, a defect develops due to material or workmanship, and the device is returned, freight prepaid, to WILKINS within 12 months from date of purchase, it will be repaired or replaced free of charge. WILKINS’ liability shall be limited to our agreement to repair or replace the valve only.

Proposition 65 Warning This product contains chemicals known to the State of California to cause cancer or birth defects or other reproductive harm.

PV-PRD SPECS:
Adjustment Range Pressure: 20-200 psi
(Flowing residual outlet pressure)
Max Inlet Pressure: 400 psi

Installation Instructions
Before installing the pressure reducing valve, flush out the line to remove loose dirt and scale which might damage the plunger and seat. Install the valve in line with the arrow on the valve body pointing in the direction of flow. All valves will be furnished with stock settings. To readjust reduced pressure, loosen the outer locknut and turn the adjustment bolt clockwise (into the bell housing) to raise the reduced pressure, or counterclockwise (out of the bell housing) to lower the reduced pressure. The valve may be installed in a horizontal or vertical position.
